Languages

JavaScript (advanced)

Python (proficient)

SQL (limited experience)

Technologies

- Windows, Linux, OSX
- Git, GitHub
- OSI Model, TCP/IP

Education

**Full-Stack Web
Development
Professional Certification**

Georgia Tech - '17
(Anticipated)

**B.B.A. Management of
Information Systems**
University of Georgia - '13

Certifications

**Associate of (ISC)² for
CISSP**
(ISC)² - '16

Experienced Professional and Growing Developer

An empathetic and business savvy technologist who went from Big 4 technology consultant to software developer. Brings creativity and an entrepreneurial spirit to work and believes in self-starting and lifelong learning. Enjoys product building and collaborative development.

Projects

Lively Music Events

<https://hzemzem.github.io/Lively-Music-App>

Description

Find music events based on a variety of parameters including keyword, date, or location. Features integrations with Google Maps and Ticketmaster and modern styling. Built with a team at the Georgia Tech Coding Camp.

Technology Stack

JavaScript, jQuery, Bootstrap, Firebase, GitHub Pages

Roles

Architect, Design Lead, API integration, Documentation, Core Contributor

Challenges Solved

- Implemented the 'Pub Sub' design pattern to decouple modules and allow multiple actions to occur simultaneously in response to an event.
- Designed a landing page that gave users a clear call-to-action while the application cached the user location to enable location based searching.
- Researched and documented an industry-standard git workflow to enable more efficient team collaboration.

Work Experience

April 2017

Senior Specialist with KPMG Cyber

- Served as lead engineer for implementations of the CyberArk Privileged Account Security technology suite.
 - Developed a command line tool in Python to extract and upload data from CSV files into CyberArk via their REST API.
 - Built a web application using Django / NGINX / PostgreSQL to collect, present, and edit data, replacing a manual spreadsheet process.
 - Developed technical recommendations and specifications for integration of services including SNMP, SMTP, LDAP, and SIEM with CyberArk.
 - Prepared key technical and business project deliverables.
 - Established and maintained an internal CyberArk lab for KPMG personnel to use as a sandbox and training area.
- January 2014
- Served as a mentor to junior staff for both soft and technical skills.
